OBJECTIVE

Results-driven Software and Site Reliability Engineer with a strong automation-first mindset. Proficient in leveraging cloud infrastructure, orchestration tools, and automation to optimize system performance and reliability. Seeking to utilize my expertise in building scalable solutions in a dynamic and challenging environment.

SKILLS

- **Programming:** Ruby, Ruby on Rails, Python, JavaScript, Shell
- **Cloud Platforms:** AWS (EC2, S3, Lambda, EBS, Route53, RDS, IAM, EKS, VPC), Azure
- **DevOps Tools:** Kubernetes, Docker, Rundeck, Chef, Ansible, Puppet, Github Actions
- **Monitoring:** New Relic, Grafana
- **Search & Log Management:** Elasticsearch, Logstash, Kibana
- **CI/CD:** Github Actions
- **Frontend:** Next.js
- **Operating Systems:** Linux

PROFESSIONAL EXPERIENCE

Software Engineer

Perforce Software – May 2023 – Present

- **Automations & CI/CD:** Developed complete deployment automation for `forge.puppet.com`, significantly reducing deployment times by 70%.
- **Puppet:** Spearheaded the management of open-source Puppet modules and implemented CI pipelines using Github Actions.
- **Maintainer:** Actively maintain multiple Ruby gems, including `puppet_forge` and `harrison`, ensuring their continuous development, stability, and compatibility with the latest industry standards. Responsibilities include overseeing updates, handling community contributions, and addressing bug fixes and feature requests to support the developer community.
- **Backend Development:** Contributed to the development of Puppet Forge's backend using Sinatra, leading to a more scalable and maintainable codebase.
- **Innovative Search Feature:** Created a new search feature that improved user navigation and search efficiency on the Puppet Forge platform.
- **Slack Automation:** Engineered custom automations around Slack using Bolt, reducing manual intervention by 40%.
- **Community Engagement:** Worked closely with the open-source Puppet community to resolve issues & contribute to discussions. Conducted regular

office hours to assist developers with troubleshooting, best practices, and using Puppet modules effectively.

- **Notification System:** Designed and developed a notification system from the ground up, overseeing the entire process from feature design to production rollout, improving system alerts and user engagement.
- **Organization Feature:** Developed and implemented an organization feature on Puppet Forge, allowing users to create and manage their organizations, with the ability to provide premium access to all organization members, enhancing collaboration and premium service offerings.
- **System Design:** Led the system design process for a new feature, collaborating with product teams to gather requirements, deciding on the appropriate technologies, preparing system design diagrams and documentation, securing approvals, and implementing the solution through to production rollout.

Site Reliability Engineer

Coupa Software – Oct 2021 – May 2023

- **AWS Infrastructure Management:** Managed key AWS services, including EC2, S3, Lambda, EKS, and VPC, ensuring high availability and optimizing for cost-efficiency.
- **One-Click Infrastructure Provisioning & Management:** Designed and implemented automated workflows that enabled one-click provisioning and management of infrastructure resources in AWS and Azure. These automations, built with Ruby, Shell, and Python, reduced the complexity of infrastructure setup and updates, cutting manual tasks by 30% and improving deployment efficiency across environments.
- **Elasticsearch Development & Optimisation:** Managed & Developed Elasticsearch infrastructure across multiple regions with clusters comprising up to 40 nodes, ensuring optimal performance and low latency.
- **Cost Optimization:** Successfully rightsized Elasticsearch clusters, achieving a 15% cost reduction while maintaining performance benchmarks.
- **Version Upgrades:** Led seamless upgrades of Elasticsearch from versions 7.14 to 8.3 with zero downtime, automating the process to ensure minimal disruption.

PROJECTS

CloudFront Logs Parser ([GitHub - malikparvez/cloudfront-logs-parser](https://github.com/malikparvez/cloudfront-logs-parser).)

- Developed a log parser for CloudFront using AWS Lambda that processes logs from an S3 bucket and sends them to OpenSearch for analysis.
- This code will parse CloudFront logs from an S3 bucket and send them to **OpenSearch**.

insecure_triggers ([GitHub - malikparvez/github_repo_audit](https://github.com/malikparvez/github_repo_audit))

- Built a tool designed to scan GitHub repositories for potentially insecure workflow configurations, specifically searching for occurrences of the `pull_request_target` trigger in GitHub Actions workflows, which can expose security vulnerabilities.
- Features:

- Scans all branches of all repositories in an organisation.
- Checks for the presence of pull_request_target in .github/workflows directory.
- Generates a report detailing repositories and branches containing potentially insecure configurations.

IT Management system

- **Tech Stack:** Backend with Ruby on Rails, Frontend using Next.js
- Developed a comprehensive **inventory management system** for the IT department of an organization to manage assets such as laptops, monitors, and other equipment provided to employees.
- **Tracking & Notifications:** Enabled asset tracking with automated email notifications and UI alerts for items that are low in stock.
- **Agreement Signing:** Integrated a feature for employees to sign agreements regarding the terms & conditions for receiving items. Signed agreements are securely stored as documents on **AWS S3**.
- **Bulk Operations:** Implemented bulk onboarding functionalities, allowing the addition of users and items in bulk via **CSV uploads**.
- **Report Generation:** Built features for generating detailed reports on inventory activities and statuses, exportable as CSV files.

ACHIEVEMENTS

- **Standout Performance Award** – Recognized for exceptional contributions to automation and infrastructure management.
- **Automation Pioneer:** Delivered multiple automation solutions that saved over 300+ hours of manual effort annually.

EDUCATION

Institute for Advanced Computing and Software Development (IACSD)

PG-CDAC, Information Technology – May 2021 - Oct 2021

- **Grade:** A
- **Key Project:** Designed an E-learning portal using Spring Boot and ReactJS

Dr. D. Y. Patil Institute of Engineering & Technology, Pune

Bachelor of Engineering – 2015 – 2019

- **Grade:** First Class

HOBBIES & INTERESTS

- **Travelling** – Exploring new cultures and places
 - **Cooking** – Passionate about experimenting with new recipes
 - **Continuous Learning** – Always exploring new technologies and methodologies
-
